5. Non-Functional Requirements

Quality Requirements:

5.1 Usability:

- TAs, faculty, department chairs, and admins should be able to access any key functionality (such as TA duty logging, proctoring assignments, or leave requests) within 3 clicks from the main dashboard, ensuring a smooth and intuitive user experience.

5.2 Reliability:

- In case of a system failure or crash, no data should be lost. The system must implement automated backups (daily or at least weekly) to enable full data recovery within 30 minutes.

5.3 Performance:

The application must support a range of device screen sizes: mobile devices (minimum 320x480 pixels), tablets (600x800 pixels), and desktops (1280x720 pixels or higher), ensuring a responsive design.

All pages and dashboards should load within 3 seconds under normal operating conditions.

The backend must handle at least 100 simultaneous requests—especially during peak periods when multiple TAs and faculty members interact with the system.

Critical backend operations (such as TA duty submissions or proctoring updates) should have response times under 2000 milliseconds.

Constraints or Pseudo Requirements:

5.4 Implementation:

- The system must be compatible with modern web browsers, including the latest versions of Chrome, Firefox, Safari, and Microsoft Edge.
- The TA MANAGEMENT SYSTEM is to be built using the specified technology stack: Spring Boot for the backend, React for the frontend, and MySQL for the database. It should run on Linux servers with Apache2.

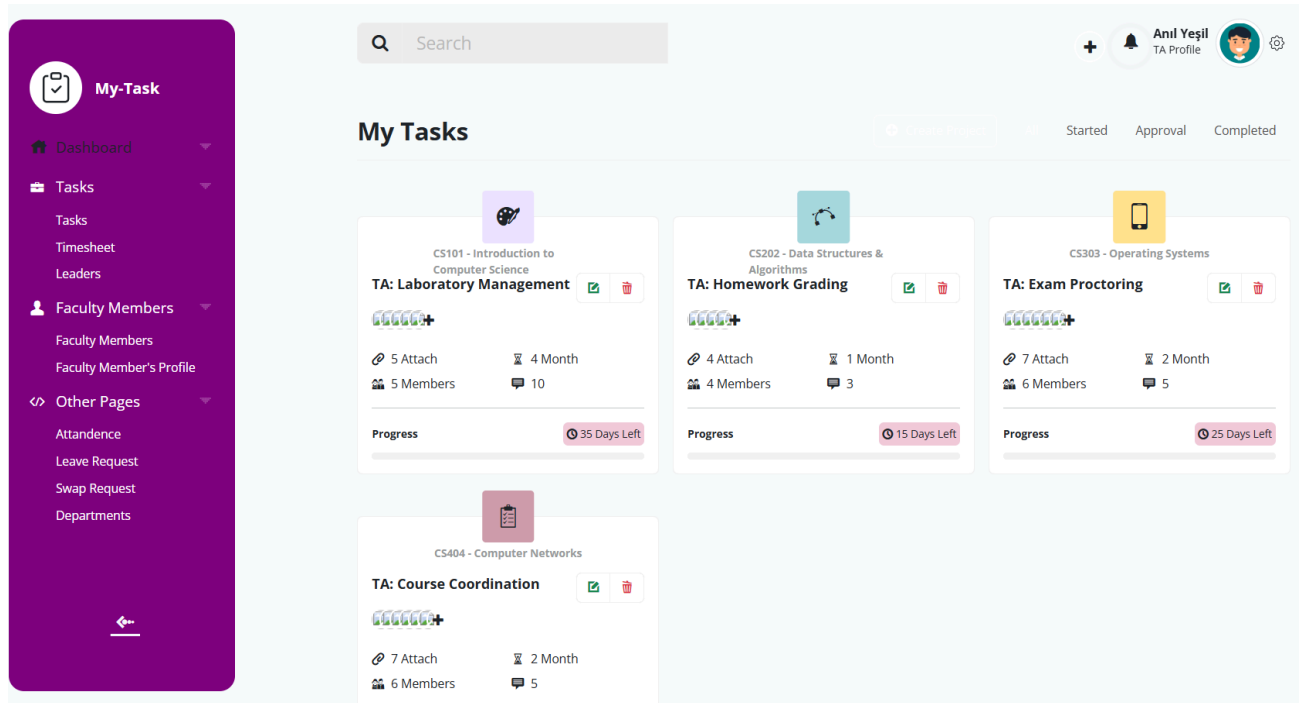

5.5 Legal:

A cookie consent banner must be displayed to obtain user consent before storing any non-essential cookies.

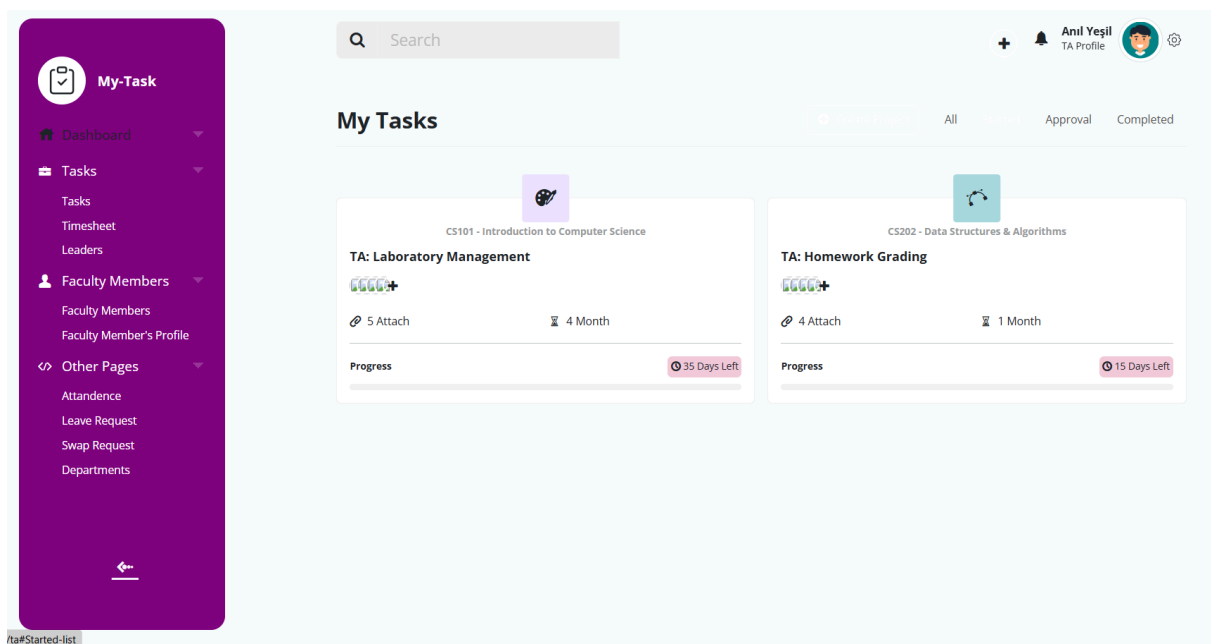

The application must comply with GDPR and other relevant data protection regulations by allowing users to request data deletion and providing clear information regarding data usage.
